Tire Carousel

Tray Carousel

Spool Carousel

THE CAROUSEL SOLUTION

Carousels provide a relatively low cost, efficient and user-friendly solution for material handling. They use vertical height or tight horizontal loops to store inventory more densely than traditional shelving. This results in goods-to-person, increased pick speed, saves space and increases accuracy. Designed and manufactured in our on-site facility, carousels rotate shelves of product directly to a picker and are the perfect automation option for distribution centers with high SKU counts. We manufacture tire, garment, spool, tray and roller carousels in our South Carolina facility.

CAROUSEL BENEFITS

- Faster order picking
- Maximized warehouse space
- Improved picking accuracy
- Better ergonomics and safety
- Integrates with Automation
- Reduced damage to products
- Durable and aesthetic powder coated finish
- Simple design and operation with easy-to-use controls
- Integrates with WMS for inventory control
- Maintenance cribs for spare parts
